

NOW PERFORMING AT A THEATER NEAR YOU "Nailor's UNI-PD"

Nailor's UNI-PD offers a uniquely engineered air diffusion pattern which allows both vertical and horizontal projection.

The economical UNI-PD integrates with the popular lay-in type ceiling grid system, and is ideal for any application where floor to ceiling heights are variable.

The circular perforated aperture provides an aesthetic appearance, capable of high airflow at minimum NC levels.

Nailor is 100% independently certified. The UNI-PD has been tested by Energetics, a division of Cerami & Associates, Inc. to ANSI/ASHRAE Standard 70-1991 and ISO 3741.
