The 1210SS Series dampers are ideal for high humidity, mildly corrosive or, with optional Type 316 construction, more severe environments where building codes require a leakage rated smoke damper as part of a static smoke control or dynamic smoke management system.

The 1210SS Series has been especially designed and tested to offer premium performance. The 1210SS Series provides the lowest leakage class available and is qualified for vertical or horizontal installation with airflow in either direction. Airfoil blade design and elimination of blade sills, top and bottom, provide lowest pressure drop. Unique inter-locking double skin blade design eliminates combustible blade seals and provides flame and smoke seal under fire conditions.

STANDARD SPECIFICATION:
