Torque $18 \mathrm{in}-\mathrm{lb}, 250^{\circ} \mathrm{F}$ for 30 min , for fire and smoke dampers

## Application

The type FSTF spring-return actuator is intended for the operation of smoke and combination fire and smoke dampers in ventilation and air-conditioning systems. The actuator will meet requirements of UL555 and UL555S when tested as an assembly with the damper. Square footage of damper operated will depend on make and model per damper manufacturer UL testing.

## Operation

Mounting of the actuator to the damper axle shaft or jackshaft is via a coldweld clamp. Teeth in the clamp and V -bolt dig into the metal of both solid and hollow shafts maintaining a perfect connection. The specially designed clamp will not crush hollow shafts. The bottom end of the actuator is held by an antirotation strap or by a stud provided by the damper manufacturer. The actuator is mounted in its fail safe position with the damper blade(s) typically closed. Upon applying power, the actuator drives the damper to the open position. The internal spring is tensioned at the same time. If the power supply is interrupted, the spring moves the damper back to its fail-safe position.

## Dimensions (Inches[mm])

## Satety Notes

Screw a conduit fitting into the actuator's bushing. Jacket the actuator's input and output wiring with suitable flexible conduit. Properly terminate the conduit in a suitable junction box.
Retrofit Safety Note
Use of the FSTF for replacement of other makes of actuators is limited in damper area. The FSLF is preferred for direct coupled applications. The FSTF may be applied for linkage applications on dampers 1.5 sq.ft. and smaller at velocities under 2000 fpm .
WARNING: For Belimo Products sold in California, these Products do or may contain chemicals which are known to the State of California to cause cancer and or birth defects or other reproductive harms. For more information see www.p65warnings.ca.gov.

## Typical Specification

All smoke and combination fire and smoke dampers shall be provided with Belimo FSTF, FSLF, FSNF, or FSAF actuators. All substitutions must be approved before submission of bid. Damper and actuator shall have UL 555S Listing for $250^{\circ} \mathrm{F}$ \&/or $350^{\circ} \mathrm{F}$. Actuator shall have been tested to UL 2043 per requirements of IMC 602.2 and NEC 300.22 (c). Where position indication is required -S models with auxiliary switches or damper blade switches will be provided per code requirements.

## Wiring Diagrams

Provide overload protection and disconnect as required.

Actuators may also be powered by 24 VIC.
Actuators may be powered in parallel. Power consumption must be observed.

S4 makes to S 6 when actuator is powered open.
合
Auxiliary switches are for end position indication or interlock control.
Double insulated.
Ground present on some models.
Meets cULLs requirements without the need of an electrical ground connection.

24 VAC/DC

Typical containment damper control wiring

Parallel Actuator Wiring

Auxiliary Switch
