## DESCRIPTION:

1. Material: Spun aluminum construction.
2. The Nailor 6300 Series Round Ceiling Diffusers are available in a comprehensive range of sizes with a capacity ranging from 50 to $5000 \mathrm{cfm}(24-2360 \mathrm{l} / \mathrm{s}$ ). They are suitable for both cooling and heating applications. They offer the same balanced appearance where different sizes are used in the same zone. They feature a 360 degree air diffusion pattern and provide excellent performance in Variable Air Volume Systems.
3. Designed for both heating and cooling applications.
4. Excellent for variable air volume applications.
5. Standard finish: AW Appliance White.

## ACCESSORIES (OPTIONAL):

$\square$ AL Aluminum finish.
4275 Radial Opposed Blade Damper (round).
EGR Equalizing Grid.
$\square$ SC Safety Chain.SP Special finish $\qquad$ .

| CONTRACTOR: | 2-12-19 | 6300 | 3-10-16 | 6300-1 |

## DESCRIPTION:

1. Material: Aluminum with corrosion-resistant steel neck bracketry.
2. The Nailor ARNR series round ceiling diffusers feature three concentric cones in all sizes to offer a balanced appearance where different sizes are used in the same area.
3. The diffusers deliver the air in a true $360^{\circ}$ radial horizontal pattern and provide excellent performance in variable air volume systems.
4. A spring clip arrangement permits quick, easy installation and removal of the inner cone assembly.
5. Discharge settings are easily field set by sliding the inner cone assembly up or down. The core is securely retained by a spring loaded friction arrangement.
6. Adjustable horizontal discharge settings allow the diffusers to accommodate different flow conditions. Position A (cones down) provides maximum capacity at minimum NC levels while position $B$ (cones up) provides higher induction and more air movement.
7. Designed for both heating and cooling applications.
8. An optional round opposed blade damper is screwdriveroperated through the face of the unit.
9. Standard finish is AW appliance white.

ROUND CEILING DIFFUSER
SPUN ALUMINUM CONSTRUCTION • ADJUSTABLE HORIZONTAL TO VERTICAL DISCHARGE PATTERN MODEL: ARNRA1

## DESCRIPTION:

1. Material: Aluminum construction with corrosion-resistant steel neck bracketry.
2. The Nailor ARNRA1 round ceiling diffuser features three concentric cones in all sizes to offer a balanced appearance where different sizes are used in the same area.
3. Designed for both heating and cooling applications. The air discharge pattern is fully adjustable between horizontal and vertical. In the fully open (down) setting, capacity is maximized and throw is horizontal. In the fully closed (up) setting, air projects vertically down from the diffuser.
4. The diffusers deliver the air in a true $360^{\circ}$ radial that provides excellent performance in variable air volume systems.
5. Discharge settings are easily field set by sliding the inner cone assembly up or down. The core is securely retained by a spring loaded friction arrangement.
6. Adjustable discharge settings allow the diffusers to accommodate different flow conditions.
7. A spring clip arrangement permits quick, easy installation and removal of the inner cone assembly.
8. An optional round opposed blade damper is screwdriver-operated through the face of the unit.
9. Designed for exposed duct or hard ceiling applications.
10. Standard finish is AW appliance white.

## DESCRIPTION:

1. Material: Aluminum outer cone with corrosion-resistant steel neck bracketry. Aluminum face.
2. The Nailor ARUNI, round ceiling diffusers have been especially designed to provide the appearance required for architectural excellence as well as high engineering performance. The smooth heavy duty face plaque is $1 / 8^{\prime \prime}(0.125)$ thick aluminum for strength and lightness. These diffusers are suitable for both architectural ceilings and exposed duct applications.
3. Designed for both heating and cooling applications. The air discharge pattern is fully adjustable between horizontal and vertical. In the fully open (down) setting, capacity is maximized and throw is horizontal. In the fully closed (up) setting, air projects vertically down from the diffuser.
4. The diffusers deliver the air in a true $360^{\circ}$ radial horizontal pattern and provide excellent performance in variable air volume systems.
5. A spring clip arrangement permits quick, easy installation and removal of the inner cone assembly.
6. Discharge setting is simply adjusted by sliding the inner face plaque assembly up or down. The core is securely retained by a spring loaded friction arrangement. There are no screws to reposition.
7. Designed for both heating and cooling applications.
8. An optional duct mounted round opposed blade damper is screwdriver-operated.
9. Standard finish is AW appliance white.

| 24 | $303 / 16$ | $61 / 2$ | $437 / 8$ | 767 | 165 | 1114 |

## DESCRIPTION:

1. Material: Heavy gauge corrosion resistant steel.
2. The Nailor RDB heavy duty round downblast ceiling diffusers have been designed for industrial and commercial applications. Unique contemporary design features a "Fibonacci spiral" adjustable aperture.
3. Especially suitable for theaters, auditoriums, factories, warehouses, convention halls, coliseums, shopping malls and other applications where ceilings are high and conditions variable.
4. The discharge pattern can be adjusted from full horizontal to full vertical. At the full vertical setting, the diffuser forces approximately $75 \%$ of the air in a long downward projection. This results in effective spot cooling or heating from high mounting locations.
5. Uniform $360^{\circ}$ discharge pattern in the horizontal mode with excellent performance in VAV applications.
6. Ring operator can be adjustable with a pole.
7. An optional round opposed blade damper is screwdriver operated and adjusted through the aperture or by removing the inner core of the diffuser.
8. Standard finish is AW Appliance White.

1. Material: Heavy gauge corrosion-resistant steel.
2. The Nailor Model 4250 is a neck mounted, radial sliding blade damper used in round neck diffuser applications to provide fine volume control.
3. Dampers have gang operated radial blades. Blades slide at right angles to the duct with protrusion above the diffuser neck, allowing the damper to work effectively in flexible duct applications.
4. The 4250 is neck mounted with steel barb clips providing secure attachment.
5. Adjustments are made at the screwdriver operator slot.
6. Available Sizes: 6", 8 ", 10", 12" and 14" (152, 203, 254, 305 and 356) dia..

AIR BALANCING DEVICE RADIAL OPPOSED BLADE DAMPER
STEEL • FOR ROUND NECK DIFFUSERS MODEL: 4275 (5" - 16" DIA.)

## DESCRIPTION:

A unique method of controlling volume through a diffuser providing premium design quality and performance. The multi-blade perimeter design offers true radial flow at any setting.
A screwdriver slot, accessible through the diffuser, requires only a half turn to adjust from fully closed to fully open. The damper is designed to fit directly on the neck of the diffuser. Simple convenient and accurate installation and operation.

## OPERATION:

Size 5 through 8 are friction type. Use screwdriver and turn operator to adjust damper setting.
Size 10 through 16 use a detent mechanism to positively hold damper setting. Using screwdriver, lift up and turn operator to desired damper setting.

1. Material: Corrosion-resistant steel construction.
2. Damper mounts directly to diffuser collar.
3. Standard Finish: Mill.

## DESCRIPTION:

1. Material: Steel construction.
2. Screw or rivet to duct.
3. Opposed blade operation.
4. Finish: Black.
LOCK NUTS:
LOOSEN BEFORE ADJUSTING DAMPER.
TIGHTEN AFTER ADJUSTING DAMPER TO PROVIDE POSITIVE LOCK.
CROSS SECTION WITH VALVES PARTLY OPEN SHOWING OPPOSED BLADE OPERATION.

## DESCRIPTION:

1. Material: Steel.
2. Opposed blade design features blades that pivot radially; working in unison to control volume and disribute the air evenly over the diffuser neck, which minimizes the need for control grids.

## nint Nailor <br> Industries Inc.

## Standard and Optional Finishes For Grilles and Diffusers

Nailor offers a selection of standard colors and finishes available on our grilles, registers and diffusers. For painted finishes, our state-of-the-art paint systems provide environmentally friendly finishing solutions with uniform coverage and coating thickness. The result is an exceptionally durable finish that resists scratching, corrosion and general wear. Additional facilities for special requirements, as well as a selection of anodized or brushed finishes, complete our ability to provide unmatched beauty and durability for any application.

NAILOR POWDER COAT PROPERTIES

| FILM THICKNESS | 2.0 to 3.0 mils |
| :---: | :---: |
| HARDNESS | 2 H |
| IMPACT <br> RESISTANCE | Direct: 160 inch - lbs. <br> Reverse 160 inch - lbs. |
| SALT SPRAY | 1000 hours |

ELECTROCOATING PROPERTIES

| FILM THICKNESS | .8 to 1.2 mils |
| :---: | :---: |
| HARDNESS | HB TO H |
| IMPACT <br> RESISTANCE <br> SALT SPRAY | 80 inch -lbs |

## POWDER COAT

Nailor's powder coat is a high-tech thermosetting polyester powder coating with superior physical properties that provide excellent color and gloss retention. The finish offers extreme durability and hardness that resists scratching, chipping and general wear. Surface preparation includes degreasing and a chemical cleaning followed by a clean rinse before a final powder coat finish is applied and baked. The environmentally friendly Nailor powder coat system assures uniform coverage and color consistency resulting in a long lasting superior finish. Colors, including simulated anodizing, which is far more economical than color anodizing, can be selected from Nailor's standard color chart or non-standard colors and can be matched from sample chips provided to Nailor.

## ELECTROCOATING

E-Coat is an environmentally friendly coating that provides complete coverage and a wide range of performance properties, formulated to meet corrosion, durability and other performance specifications. Electrocoating is a highly automated process in which paint is electrically deposited onto a metal foundation. Film build thickness is uniform and overall application efficiencies are in excess of $90 \%$. Paint is consistent on all part-to-part surfaces, preventing sags, runs or drips. E-Coat offers flexibility, better first yield pass and quicker production times compared to other forms of paint applications. Electrocoating is an excellent solution that offers superior properties and uniform finish.
CLEAR ANODIZING (Aluminum products only)
Clear anodizing is a clear oxide coating that exemplifies an aluminum surface's natural oxide coating producing a hard, scratch resistant surface that is resistant to general wear and mild chemicals. The process provides a natural looking, virtually maintenance free finish that will endure for many years.
COLOR ANODIZING (Aluminum products only)
Color anodizing is an electrolytic process where, after standard anodizing procedures, colored metallic pigments penetrate the oxide surface pores producing a corrosion resistant, colorfast finish. The process results in a natural metallic appearance that requires little maintenance.

## BRUSHED AND CLEAR COAT

Available on specific aluminum products (consult applicable product page for availability). Surface is brushed to achieve a scratch finish texture before being degreased and chemically cleaned. A clear lacquer coating is then applied to provide a durable protective finish.
\#4 BRUSHED SATIN POLISHED (Stainless Steel products only)
Surface is polished to ASTM A480 \#4 standard to achieve a bright durable finish that is resistant to mild chemicals and corrosion. A final coating is not required due to the inherent anti-corrosion properties of the stainless steel.

## PRIME COAT

Prime coat provides a stable base for painting in the field. Surface pretreatment includes degreasing and a chemical cleaning before an alkyd prime coat is applied. After a thorough cleaning for dust, etc. that can contaminate the final finish and cause premature flaking or peeling, finish coat should be field applied as soon as possible.
PAINT PREPARED ALUMINUM (Aluminum products only)
Allows for field applied paint. Surface preparation includes degreasing and a chemical cleaning followed by a clean rinse. Finish coat should be field applied as soon as possible.

## MILL FINISH

Surface is left untreated and requires cleaning, degreasing, etc. in the field before final finish can be applied if required.

## nup Nailor <br> Industries Inc.

The following standard colors and finishes are available on applicable Nailor air distribution products. Consult individual product pages for availability

The pictured finishes have been represented as best as possible within printing limitations. However, actual finish may vary. Contact your Nailor representative for a color chip sample on the material specified for a more accurate representation.

|  | Noise Criteria | 12 | 19 | 25 | 30 | 34 | 38 | 41 | 47 | 52 | 55 |

## Performance Notes:

1. All pressures are in inches w.g.. To obtain static pressure, subtract the velocity pressure from the total pressure.
2. Radius of diffusion values are given at 100 and 50 fpm terminal velocities under isothermal conditions.
3. Performance data as shown is for the diffuser only, with the cones in the "down" position. Performance for the cones in the "up" position can be approximated by multiplying the total pressures by 1.6, adding 5 Noise Criteria to the sound levels, and multiplying the radius of diffusion by .90 .
4. Noise Criteria (NC) values are based upon 10 dB room absorption, re $10^{-12}$ watts. Dash (-) in space indicates an Noise Criteria of less than 10.
5. Data derived from tests conducted in accordance with ANSI/ASHRAE Standard 70 2006.

| Neck <br> Size <br> Dia. in <br> Inches | Ak <br> Factor |

## Performance Notes:

1. All pressures are in inches w.g.. To obtain static pressure, subtract the velocity pressure from the total pressure. 2. Horizontal throws are given at 150, 100 and 50 fpm terminal velocities under isothermal conditions with the face fully closed.
2. Vertical throw (projection) is given at 50 fpm terminal velocity under isothermal conditions with the face fully open For non-isothermal conditions, use the following correction factors:

| T Temperature <br> Differential | Correction <br> Factor |
| :---: | :---: |
| $20^{\circ} \mathrm{F}$ Cooling | $\times 1.40$ |
| Isothermal | $\times 1.00$ |
| $10^{\circ} \mathrm{F}$ Heating | $\times 0.83$ |
| $20^{\circ} \mathrm{F}$ Heating | $\times 0.58$ |
| $30^{\circ} \mathrm{F}$ Heating | $\times 0.53$ |
| $40^{\circ} \mathrm{F}$ Heating | $\times 0.43$ |

4. Noise Criteria (NC) values are based upon 10 dB room absorption, re $10^{-12}$ watts. Dash (-) in space indicates an Noise

Criteria of less than 20.
Values shown are for the horizontal discharge pattern (center closed) and vertical discharge pattern (center fully open).
5. Data derived from tests conducted in accordance with ANSI/ ASHRAE Standard 70 - 2006.

| Nominal <br> Neck <br> Size <br> Dia. in <br> Inches | Ak <br> Factor |

## Performance Notes:

1. All pressures are in inches w.g..
2. Horizontal throws are given at 150, 100 and 50 fpm terminal velocities under isothermal conditions.
3. Performance data as shown is for ceiling mounted diffusers. For exposed duct mounting, multiply the throw values by 0.70 .
4. Noise Criteria (NC) values are based on 10 dB room absorption, re $10^{-12}$ watts. Dash (-) in spaces indicates an Noise Criteria level of less than 15.
5. Data derived from tests conducted in accordance with ANSI/ASHRAE Standard 70-2006.

## Performance Notes:

1. All pressures are in inches w.g.. To obtain static pressure, subtract the velocity pressure from the total pressure.
2. Horizontal throws are given at 150, 100 and 50 fpm terminal velocities under isothermal conditions for a ceiling mounted diffuser (inner cones in fully down position A). For exposed duct mounting, multiply the throw values by 0.70.
3. Vertical throws are given at 150,100 and 50 fpm under isothermal conditions (inner cones in fully up position B). For nonisothermal conditions, use the following correction factors:

| T Temperature <br> Differential | Correction <br> Factor |
| :---: | :---: |
| $20^{\circ} \mathrm{F}$ Cooling | $\times 1.40$ |
| Isothermal | $\times 1.00$ |
| $10^{\circ} \mathrm{F}$ Heating | $\times 0.83$ |
| $20^{\circ} \mathrm{F}$ Heating | $\times 0.58$ |
| $30^{\circ} \mathrm{F}$ Heating | $\times 0.53$ |
| $40^{\circ} \mathrm{F}$ Heating | $\times 0.43$ |

4. Noise Criteria (NC) values are based upon 10 dB room absorption, re $10^{-12}$ watts. Dash (-) in space indicates an Noise Criteria of less than 15.
5. Data derived from tests conducted in accordance with ANSI/ASHRAE Standard 70-2006.
