	G	-	6 (152)	6 (152)	9 (229)

**DESCRIPTION:**

1. Material: Extruded Aluminum.
2. Model 45DL1 is designed to handle large air capacities and provide long throws. It is ideally suited to applications where ductwork cannot be brought close to the occupants such as; shopping malls, industrial plants and stadiums.
3. Length of throw, direction and horizontal spread can be controlled by means of the rotating drum and pivoted adjustable vanes.
4. Felt seal around drum minimizes air leakage.
5. Standard finish is AW Appliance white.

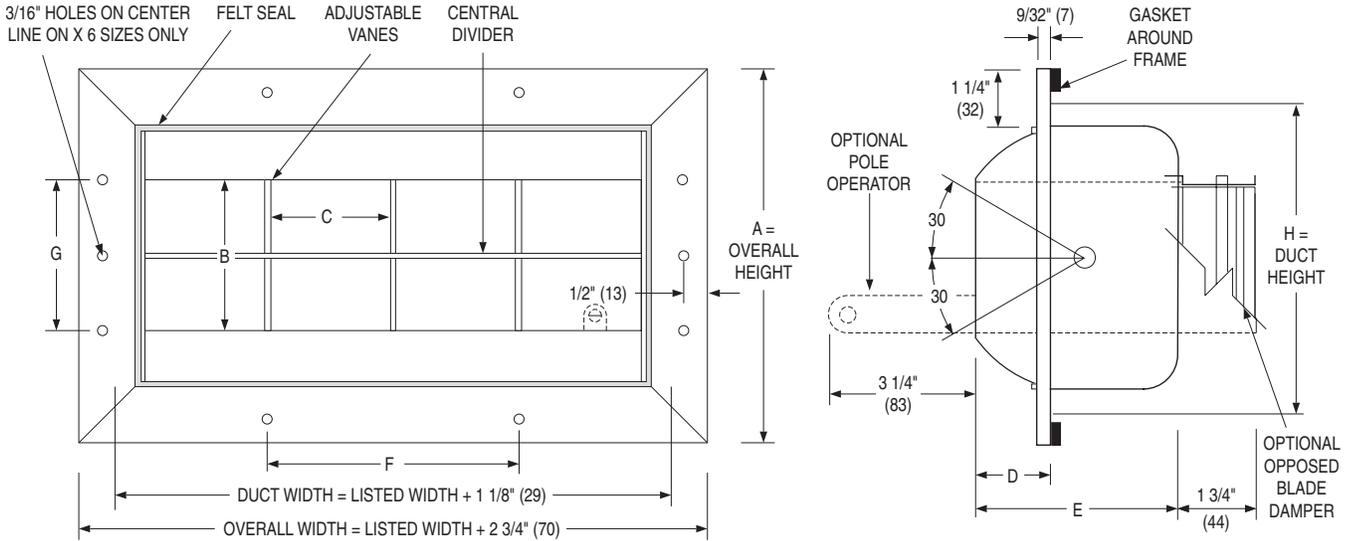

**OPTIONS:**

- Opposed blade damper. Model 45DL1-0  
(Note: Not recommended where static pressure drop across drum louver exceeds 0.25" w.g.).
  - PB Pole Operator
- Finish:
- AL Aluminum
  - MI Mill
  - SP Special \_\_\_\_\_ .

	G	-	6 (152)	6 (152)	9 (229)

**DESCRIPTION:**

1. Material: Extruded Aluminum.
2. Model 45DL2 is designed to handle large air capacities and provide long throws. It is ideally suited to applications where ductwork cannot be brought close to the occupants such as; shopping malls, industrial plants and stadiums.
3. Model 45DL2 incorporates two sets of pivoted adjustable deflecting vanes separated by a central divider, When the top and bottom set of vanes are set in opposite directions, the resulting turbulent counter-flow increases induction for more rapid mixing and shortens the throw.
4. Felt seal around drum minimizes air leakage.
5. Standard finish is AW Appliance white.

**OPTIONS:**

- Opposed blade damper. Model 45DL2-0  
(Note: Not recommended where static pressure drop across drum louver exceeds 0.25" w.g.).
  - PB Pole Operator
- Finish:
- AL Aluminum
  - MI Mill
  - SP Special \_\_\_\_\_ .

**DESCRIPTION:**

1. Material: Aluminum.
2. Models 45DLC1/45DLC2 are designed to handle large air capacities and provide long throws. It is ideally suited for applications where ductwork cannot be brought close to the occupants in large conditioned spaces such as; shopping malls, industrial plants and stadiums.
3. Curved frame installs directly on spiral ducts without the use of duct taps.

4. Length of throw, direction and horizontal spread can be controlled by means of the rotating drum and pivoted adjustable vanes.
5. Felt seal around drum minimizes air leakage and holds drum secure in selected position.
6. 45DLC2 Split Vane option allows bi-directional horizontal throw.
7. Standard finish is AW Appliance white.

**OPTIONS:**

- OBD Opposed Blade Damper
  - DEX Damper/Extractor (Air Scoop)
  - PB Pole Operator
- Finish:
- AL Aluminum
  - MI Mill
  - SP Special \_\_\_\_\_

Nailor offers a selection of standard colors and finishes available on our grilles, registers and diffusers. For painted finishes, our state-of-the-art paint systems provide environmentally friendly finishing solutions with uniform coverage and coating thickness. The result is an exceptionally durable finish that resists scratching, corrosion and general wear. Additional facilities for special requirements, as well as a selection of anodized or brushed finishes, complete our ability to provide unmatched beauty and durability for any application.

**NAILOR POWDER COAT PROPERTIES**

FILM THICKNESS	2.0 to 3.0 mils
HARDNESS	2 H
IMPACT RESISTANCE	Direct: 160 inch - lbs. Reverse 160 inch - lbs.
SALT SPRAY	1000 hours

**ELECTROCOATING PROPERTIES**

FILM THICKNESS	.8 to 1.2 mils
HARDNESS	HB TO H
IMPACT RESISTANCE	80 inch - lbs
SALT SPRAY	100 hours

**POWDER COAT**

Nailor's powder coat is a high-tech thermosetting polyester powder coating with superior physical properties that provide excellent color and gloss retention. The finish offers extreme durability and hardness that resists scratching, chipping and general wear. Surface preparation includes degreasing and a chemical cleaning followed by a clean rinse before a final powder coat finish is applied and baked. The environmentally friendly Nailor powder coat system assures uniform coverage and color consistency resulting in a long lasting superior finish. Colors, including simulated anodizing, which is far more economical than color anodizing, can be selected from Nailor's standard color chart or non-standard colors and can be matched from sample chips provided to Nailor.

**ELECTROCOATING**

E-Coat is an environmentally friendly coating that provides complete coverage and a wide range of performance properties, formulated to meet corrosion, durability and other performance specifications. Electrocoating is a highly automated process in which paint is electrically deposited onto a metal foundation. Film build thickness is uniform and overall application efficiencies are in excess of 90%. Paint is consistent on all part-to-part surfaces, preventing sags, runs or drips. E-Coat offers flexibility, better first yield pass and quicker production times compared to other forms of paint applications. Electrocoating is an excellent solution that offers superior properties and uniform finish.

**CLEAR ANODIZING** (Aluminum products only)

Clear anodizing is a clear oxide coating that exemplifies an aluminum surface's natural oxide coating producing a hard, scratch resistant surface that is resistant to general wear and mild chemicals. The process provides a natural looking, virtually maintenance free finish that will endure for many years.

**COLOR ANODIZING** (Aluminum products only)

Color anodizing is an electrolytic process where, after standard anodizing procedures, colored metallic pigments penetrate the oxide surface pores producing a corrosion resistant, colorfast finish. The process results in a natural metallic appearance that requires little maintenance.

**BRUSHED AND CLEAR COAT**

Available on specific aluminum products (consult applicable product page for availability). Surface is brushed to achieve a scratch finish texture before being degreased and chemically cleaned. A clear lacquer coating is then applied to provide a durable protective finish.

**#4 BRUSHED SATIN POLISHED** (Stainless Steel products only)

Surface is polished to ASTM A480 #4 standard to achieve a bright durable finish that is resistant to mild chemicals and corrosion. A final coating is not required due to the inherent anti-corrosion properties of the stainless steel.

**PRIME COAT**

Prime coat provides a stable base for painting in the field. Surface pretreatment includes degreasing and a chemical cleaning before an alkyd prime coat is applied. After a thorough cleaning for dust, etc. that can contaminate the final finish and cause premature flaking or peeling, finish coat should be field applied as soon as possible.

**PAINT PREPARED ALUMINUM** (Aluminum products only)

Allows for field applied paint. Surface preparation includes degreasing and a chemical cleaning followed by a clean rinse. Finish coat should be field applied as soon as possible.

**MILL FINISH**

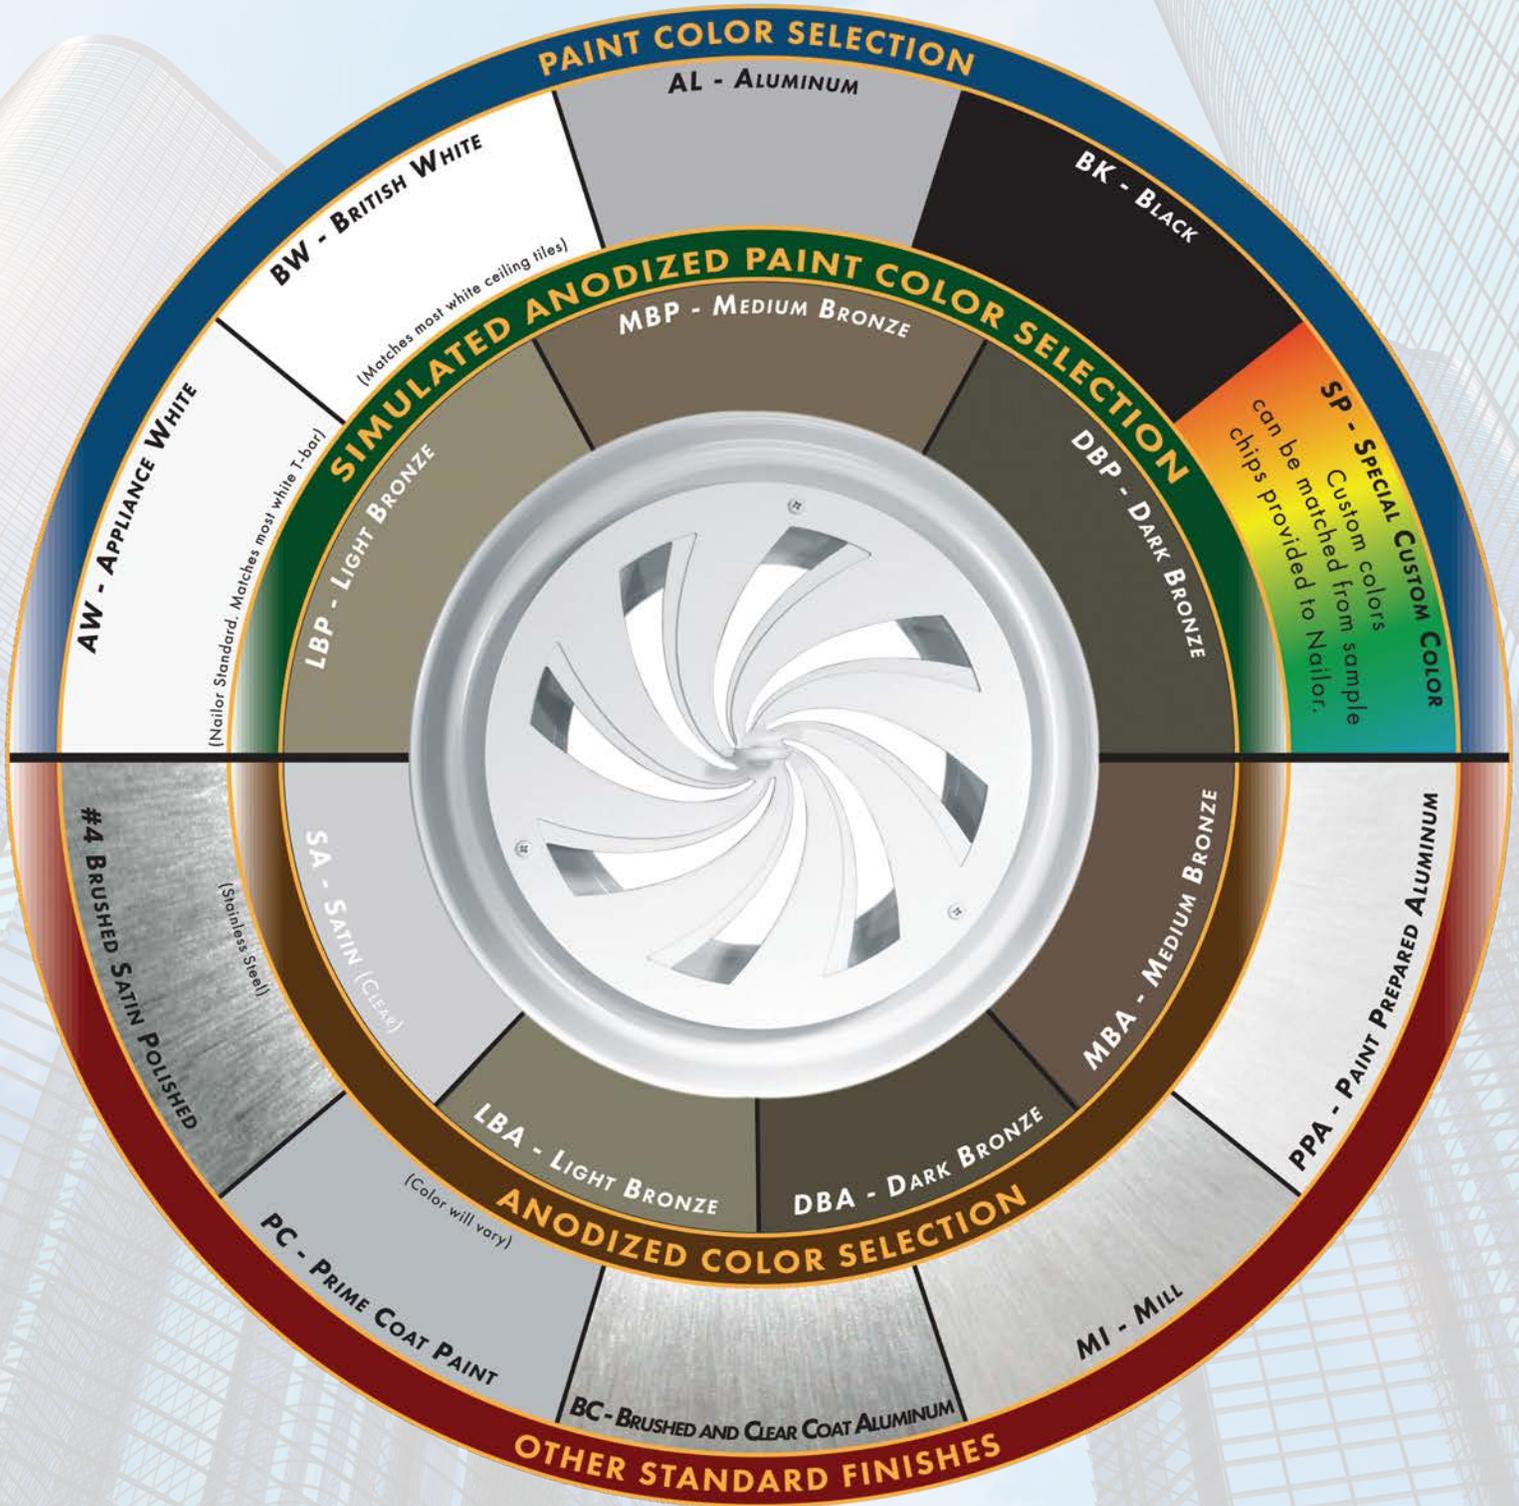

Surface is left untreated and requires cleaning, degreasing, etc. in the field before final finish can be applied if required.

**Nailor**<sup>®</sup>  
Industries Inc.

## STANDARD AND OPTIONAL FINISHES FOR GRILLES AND DIFFUSERS

The following standard colors and finishes are available on applicable Nailor air distribution products. Consult individual product pages for availability

The pictured finishes have been represented as best as possible within printing limitations. However, actual finish may vary. Contact your Nailor representative for a color chip sample on the material specified for a more accurate representation.

**DBK** - Black (for registers ordered with factory mounted dampers) - **BA** - Perforated Diffusers (4300 series only) Appliance White (AW) face with black back pan and pattern controllers.

"Complete Air Control and Distribution Solutions."

	Noise Criteria	–	–	28	37	44	48	54	63	70

#### Performance Notes:

1. All pressures are in inches w.g..
2. Throw values are given at 150, 100 and 50 fpm terminal velocities under isothermal conditions.
3. Total pressure, throw and Noise Criteria are based on 45DL1 at 0° deflection. Correction factors for other conditions are listed in the chart.

5. Noise Criteria (NC) values are based upon 10dB room absorption, re 10<sup>-12</sup> watts. Dash (–) in space indicates an Noise Criteria of less than 15.
6. Data derived from tests conducted in accordance with ANSI/ASHRAE Standard 70 – 2023.

#### Correction Factor

Model	Deflection	TP	Throw	NC
45DL1	15°	x 1.5	x .85	+ 4
	30°	x 1.9	x .73	+ 9
45DL2	0°	x 1.3	—	—
	15°	x 1.7	x .85	+4
	30°	x 2.2	x .73	+9

	Noise Criteria	–	–	25	31	36	41	45	52	55

#### Performance Notes:

- All pressures are in inches w.g..
- Throw values are given at 150, 100 and 50 fpm terminal velocities under isothermal conditions.
- Total pressure, throw and Noise Criteria are based on 45DL1 at 0° deflection. Correction factors for other conditions are listed in the chart.

- Noise Criteria (NC) values are based upon 10dB room absorption, re 10<sup>-12</sup> watts. Dash (–) in space indicates a Noise Criteria of less than 15.
- Data derived from tests conducted in accordance with ANSI/ASHRAE Standard 70 – 2023.
